Regional Exposure by Revenue

Currency Exposure

**Intra year performance figures are unaudited; the returns are net of management fees and before taxes. They do not include franking credits. The MSCI figures are the MSCI All Country World Index IMI Net Total Return (AUD) Index.

¹ Standard Deviation: Measure of the annualised volatility of monthly returns.

² Sharpe Ratio: Measure of the risk-adjusted performance.

³ Correlation: Measure of how PMGF and MSCI index move in relation to each other.

Peters MacGregor generally hedges foreign currency exposure when it invests in international securities. As part of this policy it considers the intrinsic currency exposures of investee companies. The graph summarises the principal net currency exposures based on generally accepted accounting standards. GAAP measures currency exposure based on the country of stock exchange listing in which the investee company security is held, which is not necessarily reflective of the intrinsic currency exposures of the investee companies. Regional Revenue breakdowns are approximations.
